- International trade topics
  - Gains from trade, explaining patterns of trade, effects of government policies on trade
- International finance topics
  - Balance of payments, exchange rate determination, international policy coordination and capital markets
- International trade versus finance
What Is International Economics About?

• International economics is about how nations interact through:
  – trade of goods and services, flows of money, and investment.

• International economics is an old subject, but continues to grow in importance as countries become tied more to the international economy.

• Nations are now more closely linked than ever before.
What Is International Economics About? (cont.)

- U.S. exports and imports as shares of gross domestic product have been on a long-term upward trend.
  - International trade has roughly tripled in importance compared to the economy as a whole in the past 50 years.
  - Both imports and exports fell in 2009 due to the recession.

What Is International Economics About? (cont.)

- Compared to the United States, other countries are even more tied to international trade.
  - Their imports and exports as a share of GDP are substantially higher.
  - The United States, due to its size and diversity of resources, relies less on international trade than almost any other country.

Gains from Trade

- That there are gains from trade is probably the most important insight in international economics.
- Countries selling goods and services to each other almost always generates mutual benefits.
  1. When a buyer and a seller engage in a voluntary transaction, both can be made better off.
  - Norwegian consumers import oranges that they would have a hard time producing.
2. How could a country that is the most (least) efficient producer of everything gain from trade?

- Countries use finite resources to produce what they are most productive at (compared to their other production choices), then trade those products for goods and services that they want to consume.
- Countries can specialize in production, while consuming many goods and services through trade.
Gains from Trade (cont.)

3. Trade benefits countries by allowing them to export goods made with relatively abundant resources and imports goods made with relatively scarce resources.

4. When countries specialize, they may be more efficient due to larger-scale production.

5. Countries may also gain by trading current resources for future resources (international borrowing and lending) and due to international migration.
Gains from Trade (cont.)

• Trade is predicted to benefit countries as a whole in several ways, but trade may harm particular groups within a country.
  – International trade can harm the owners of resources that are used relatively intensively in industries that compete with imports.
  – Trade may therefore affect the distribution of income within a country.
Patterns of Trade

- The pattern of trade describes who sells what to whom.
- Differences in climate and resources explain why Brazil exports coffee and Saudi Arabia exports oil.
- But why does Japan export automobiles, while the U.S. exports aircraft?
- Why some countries export certain products can stem from differences in:
  - Labor productivity
  - Relative supplies of capital, labor and land and their use in the production of different goods and services
Effects of Government Policies on Trade

- Policy makers affect the amount of trade through
  - tariffs: a tax on imports or exports,
  - quotas: a quantity restriction on imports or exports,
  - export subsidies: a payment to producers that export,
  - or through other regulations (ex., product specifications) that exclude foreign products from the market, but still allow domestic products.

- What are the costs and benefits of these policies?
The Effects of Government Policies on Trade (cont.)

- If a government restricts trade, what are the costs if foreign governments respond likewise?
- Trade policies are often chosen to cater to special interest groups, rather than to maximize national welfare.
- Governments tend to adopt tariffs, then negotiate them down in exchange for reduction in trade barriers of other countries.
International Trade Versus Finance

• International trade focuses on transactions involving movement of goods and services across nations.
  – International trade theory (Chapters 2–8) and policy (Chapters 9–12)

• International finance focuses on financial or monetary transactions across nations.
