Data Project -- Due Tuesday November 2, 2015

The data project is designed to help you get your data together for your final analysis. Please double space the entire document, including legends, and insert page numbers. The data project should include two sections: methods and figures. Please revise your methods section from the research proposal and create two original figures that display your data in a spatially explicit way.

When revising your methods section keep in mind all that needs to be included. Please look at the methods sections of published journal articles for an example.
1. Describe the data in your study.
2. Describe the research protocol.
3. Explain how measurements are made and what calculations will be performed
4. State which statistical tests will be done to analyze the data

All maps should have the same projection and extent and a detailed figure caption. The explanation in the figure caption should be understandable without reference to the text. Multi-panel figures are acceptable. Number your figures and refer to them in your methods section.
