0	Metric Faithfulness: from the origins to modern applications	1
0.1	Metric faithfulness	2
0.1.1	Expansion and compression moduli	2
0.2	Historical and Foundational Results	2
0.3	The geometric approach: a powerful versatile tool	2
0.3.1	Applications in computer science	2
0.3.2	Applications in topology and noncommutative geometry	2
0.3.3	Applications in group theory	2

Part I Lipschitz Geometry

1	Metric Invariants	5
1.1	Enflo-type	6
1.1.1	Definition and other variations	6
1.1.2	Distortion lower bounds for the Hamming cubes	6
1.2	Markov-convexity	6
1.2.1	Definition and examples	6
1.2.2	Distortion lower bounds for trees	6
1.2.3	Distortion lower bounds for diamond and Laakso graphs	6
1.3	Markov type	6
1.3.1	Definition and examples	6
1.3.2	Distortion lower bounds for graphs with large girth	6
1.4	Metric type and metric cotype	6
1.4.1	Definitions and permanence properties	6
1.4.2	Distortion lower bounds for integer grids	6
1.5	X_p metric spaces	6
1.5.1	Definition and history of the X_p -inequalities	6
1.5.2	Applications	6

2	Low Distortion Embeddings into Low Dimensional Spaces	7
2.1	Low distortion embeddings	7
2.1.1	Stochastic decompositions of finite spaces	7
2.1.2	Stochastic decompositions of spaces with low intrinsic dimension	7
2.2	Dimension reduction and Hilbertian geometry	7
2.2.1	Reduction to logarithmic dimension in ℓ_2	7
2.3	Dimension reduction in ℓ_1	7
2.3.1	Lower bounds based on diamond graphs	7
2.4	Dimension reduction in ℓ_∞	8
2.4.1	Lower bound based on large girth graphs	8
2.4.2	Lower bounds based on measure concentration	8
2.4.3	Lower bounds based on geometric arguments	8
2.5	Dimension reduction for spaces with low intrinsic dimension	8
2.5.1	Lower bounds for doubling subsets of ℓ_p	8
3	Trees and ultrametric spaces	9
3.1	Trees	9
3.1.1	Structural results	9
3.1.2	Low distortion embeddings of trees	9
3.1.3	Low dimensional embeddings of trees	9
3.1.4	Dimension reduction for trees in ℓ_1	10
3.2	Ultrametric spaces	10
3.2.1	Structural results	10
3.2.2	Embeddings of ultrametries	10
3.2.3	Ultrametric skeletons	10
4	Embeddability of Infinite Spaces	11
4.1	Finite Determinacy of Embeddability Problems	12
4.1.1	Isometric embeddability into Hilbert spaces	12
4.1.2	Lipschitz embeddability of locally finite spaces	12
4.1.3	Applications	12
4.2	Bi-Lipschitz embeddability into c_0	12
4.2.1	Embeddability into the positive cone of c_0	12
4.2.2	Embeddability into c_0	12
4.3	The infinite Hamming cube	12
4.3.1	Almost isometric embeddability into spaces of continuous functions	12
4.3.2	Topological obstruction to low distortion embeddability	12
5	Metric Characterizations of Spaces with Small Slicing Indices	13
5.1	Dentability index	13
5.1.1	The dentability index $D(X)$	13
5.1.2	Renorming of spaces with $D(X) \leq \omega$	13
5.1.3	Metric characterization of spaces with $D(X) \leq \omega$	14

5.2 Szlenk Index 14

5.2.1 The Szlenk index $Sz(X)$ 14

5.2.2 Renorming of reflexive spaces with $Sz(X) \leq \omega$ and $Sz(X^*) \leq \omega$ 14

5.2.3 Metric characterization of reflexive spaces with $Sz(X) \leq \omega$ and $Sz(X^*) \leq \omega$ 14

5.2.4 Towards a metric characterization of reflexive spaces with $Sz(X) \leq \omega$ 14

Part II Small Scale Geometry and Large Scale Geometry

6 Embeddings preserving the small and large scale geometries simultaneously 17

6.1 Almost Lipschitz embeddability 17

6.1.1 Definition 17

6.1.2 Almost Lipschitz embeddability of proper spaces 17

6.2 Nearly isometric embeddability 17

6.2.1 Definition 18

6.2.2 Nearly isometric embeddability of stable spaces 18

6.3 Metric transforms 18

6.3.1 A dichotomy for metric transforms 18

6.3.2 Embedding snowflakings of spaces with intrinsic low dimension 18

6.3.3 Embeddability of snowflakings of Banach spaces 18

7 Uniform and coarse embeddability of metric spaces 19

7.1 Uniform embeddability 19

7.1.1 Uniform embeddings and Mazur maps 19

7.1.2 Uniform embeddability into Hilbert spaces 19

7.1.3 Uniform embeddability into reflexive Banach spaces 19

7.2 Coarse embeddability 20

7.2.1 Coarse embeddings 20

7.2.2 Coarse embeddability into Hilbert spaces 20

7.2.3 Property A and coarse embeddings 20

7.2.4 Coarse embeddability into reflexive Banach spaces 20

7.3 Poincare type inequalities 20

7.3.1 Nonlinear spectral gaps 20

7.3.2 Applications 20

7.4 Strong embeddability 20

7.4.1 Obstruction to coarse or uniform embeddability into reflexive spaces: Property Q 20

7.4.2 More on the geometry of ℓ_∞ 20

8	Coarse Lipschitz geometry of metric spaces	21
8.1	Coarse Lipschitz embeddings	21
8.1.1	Link with uniform or Lipschitz equivalences	21
8.2	Coarse Lipschitz invariants: the compression exponents	21
8.2.1	Permanence properties	21
8.2.2	Large distortion incurs small compression	21
8.2.3	Compression exponents of spaces with low intrinsic dimension	21
8.3	Coarse Lipschitz geometry of Banach spaces	21
8.3.1	The Lebesgue spaces	21
Part III Large Scale Geometry of Finitely Generated Groups		
9	Equivariant large scale geometry of finitely generated groups	25
9.1	Equivariant coarse geometry	26
9.1.1	Equivariant coarse embeddings	26
9.1.2	Amenability and equivariant embeddings	26
9.2	Equivariant quasi-isometric geometry	26
9.2.1	Equivariant compression exponents	26
9.2.2	Quasi-isometric invariance of the equivariant ℓ_p -compression exponent of amenable groups	26
9.2.3	Large equivariant Hilbertian compression implies amenability	26
9.2.4	Random walks and equivariant compression exponent lower bounds	26
10	Hyperbolic groups	27
10.1	Definition and examples	27
10.2	Embeddability into product of binary trees	27
10.3	Metric characterization of superreflexivity in terms of hyperbolic groups	27
11	The Heisenberg Group	29
11.1	Definitions of the discrete Heisenberg group	29
11.2	No quasi-isometric equivariant embeddings into ergodic spaces	29
11.3	Euclidean distortion of balls	29
12	Thompson's group F	31
12.1	Definition	31
12.2	Hilbertian compression of Thompson's group F	31
13	Lamplighter groups	33
13.1	Cyclic lamplighter groups	33
13.1.1	Euclidean distortion of the cyclic lamplighter groups $C_2 \wr C_n$	33
13.2	ℓ_p -compression of $Z \wr Z$	33
13.3	Lamplighter groups over trees	33

13.3.1	Equivariant embeddability of lamplighter groups over trees	33
14	Baumslag-Solitar groups	35
14.1	Definition	35
14.2	ℓ_p -compression exponents of Baumslag-Solitar groups	35
14.3	Equivariant embeddability of Baumslag-Solitar groups	35
Part IV Appendices		
A	Elements of topology	39
A.1	General topology	39
A.2	Metric spaces	39
B	Elements of graph theory	41
B.1	Finite graphs	41
B.2	Families of expander graphs	41
B.2.1	Combinatorial definition	41
B.2.2	Spectral definition	41
B.2.3	Existence	41
B.3	Infinite graphs	41
C	Elements of group theory	43
C.1	Topological groups	43
C.2	Group actions	43
C.3	Semi-direct products	43
C.4	Wreath products	43
C.5	HNN extensions	43
D	Probabilistic Tools	45
D.1	Measure theory	45
D.2	Probabilistic inequalities	45
